

INSTALLATION INSTRUCTIONS

F654 AND SSF654

(H.I.D. BACKBOX SHIPPED AHEAD)

- Power **must** be off during installation and maintenance!!
- Fixtures **must** be installed by a licensed electrician and in accordance with the National Electrical Code and **any local codes that may apply!!**

NOTE: BACKPLATE STYLE MAY VARY ON THESE FIXTURES,
BUT ASSEMBLY IS SIMILAR FOR ALL DESIGNS.

1. Place backplate assembly (1) into the backbox aligning all holes and slots with the threaded three studs (2) on the surface of the housing. Secure backplate with the supplied hardware.
2. Orient the barrier plate (3) over the backplate assembly being sure to align all holes and slots - secure as before with the supplied hardware.
3. Locate the reflector assembly (4), as required, into the backbox and secure to the center stud with the included hardware.
4. Orient the supply wires (5) into the junction box on the fixture housing.
5. Connect incoming power wires to the fixture's supply wires in accordance with the National Electrical Code and any applicable local codes. Be sure that the voltage is correct!!

The manufacturer reserves the right to make design changes to improve the performance and manufacturing methods of the luminaire, without changing the installed appearance of specifications.
